

## Business Continuity Alert System

Regain control, reduce damage and recover fast.

Your organization has critical functions that need to survive an emergency (e.g., earthquake, an act of terror, cyber attack, etc.). Reliable communication is key in keeping people safe and business continuity intact. evigilo delivers a reliable, bi-directional, multi-channel and proven, mass-notification system, designed for and tested in cases of emergency. It allows you to warn employees and instruct them to safety, to inform clients, to receive information from different sites, all in real-time. It is the difference between chaos and control, between a disaster and a contained situation.

**To know. To act. In time.**

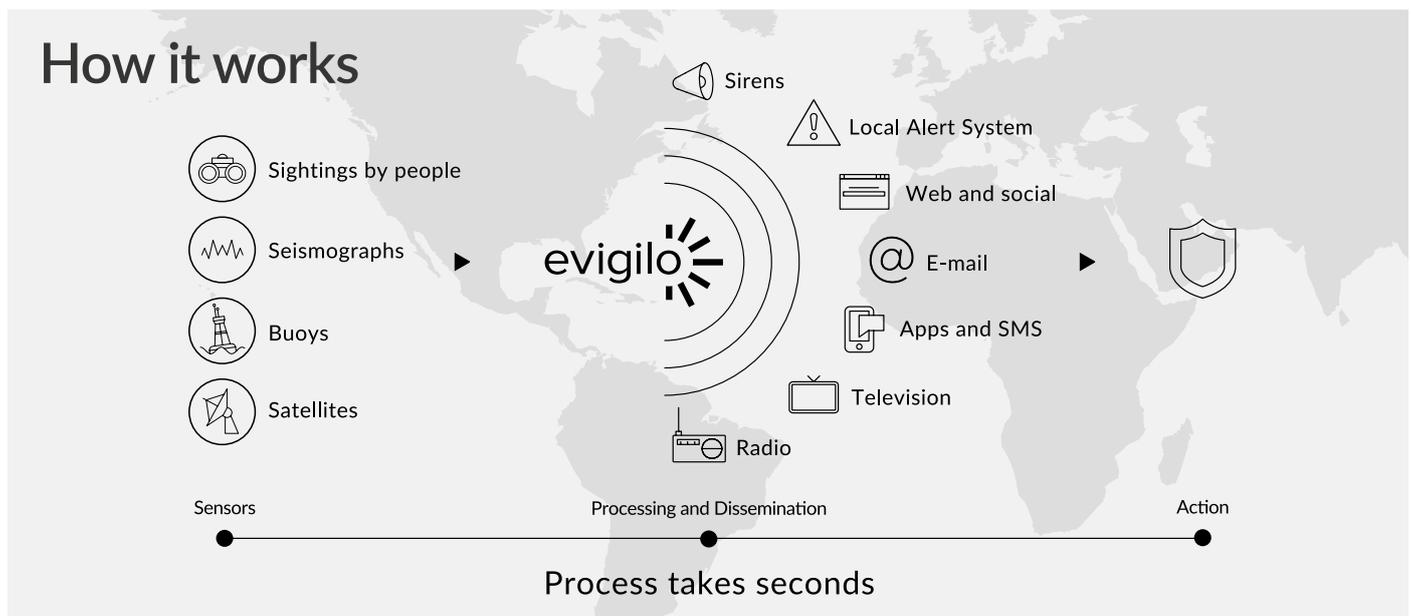

Fast and continues communication despite compromised assets, will help reduce and prevent damage. Regain control and resume business functionality. An effective emergency communication system allows managers to get a clear picture of what is happening, when it is happening and act accordingly by disseminating information and instructions to the relevant people, wherever they are.

We hope you'll never use it. You'll know it will work.

There is no other system in the world that has the operational and technological experience of evigilo. There is no other system that was tested under the harsh, real conditions of natural disaster and military conflict. Tested and performed flawlessly.

## Technology Unrivaled

evigilo's platform is geo-targeted, bi-directional, group-specific and multi-channel (covering every imaginable medium except telepathy). The system connects to virtually all sensors available and to all distribution channels – sirens, pagers, smartphone apps, sms / text, social media, internet, email, automatic dialers, announcement systems and even billboards. The system receives a signal from a sensor (e.g., seismographs, cameras, detectors or human reports), processes it according to a predefined policy and disseminates messages to the relevant people (whether it is 10 people or 100,000).

**To know. To act. In time.**

# Some events you can't prevent. evigilo allows you to react and recover. Fast.

Mission-critical business functions demand effective communication, especially in time of crisis.

## Financial Services

**Business continuity, compliance and safety.**

Quick response to an emergency is critical in financial services. It might be an earthquake or a financial-quake. Both demand immediate action and short cycle to business continuity. evigilo's platform allows for real-time, multi-channel, alert issuing that can be geo-targeted or group targeted (informing only the people that need to know). It is the perfect solution for emergency control, reducing damage, saving lives, regaining control and returning to continuous business operation.

## Transportation

**Inform, control, prevent panic – save lives, return to normal.**

The Transportation sector deals with both ensuring service continuity and the passengers' security. Keeping people informed (public and employees), sourcing information from the crowd getting a clear picture of what is happening and disseminating instructions will save lives and help return to normal fast. It's that simple.

## Energy

**Contain, control and recover.**

The Energy and Utilities sectors define the meaning of "mission-critical" and an emergency incident could easily risk the lives of employees and of the public. Executives in these sectors are on high alert for keeping people safe, managing business continuity and protecting assets. evigilo delivers a reliable, robust, bi-directional, multi-channel, compliant, emergency communication system that helps contain, control and recover in emergency situations – saving lives, saving time, saving money.

## Healthcare

**Helping healthcare professionals deliver the best care, no matter what.**

In an emergency you want to reduce confusion and direct efforts to go back to normal fast. evigilo's solution allows you to instantly inform any group of people you choose, quietly, privately or publicly. It will save lives, it will improve recovery, it will work when you will need it most.

**To know. To act. In time.**
